(54) Title: OPTICAL MEDIA PROTECTION DRIVER

- The Dispatch Routine of the SCSI layer is replaced with a Dispatch hook routine of the driver. This routine calls the original Dispatch Routine.
- The Completion Routine of the SCSi layer is replaced with a Completion Hook Routine of the driver. This routine calls the original Completion Routine.

(57) Abstract: A method to protect content within protected data areas on a target optical record carrier against unauthorized reading and/or copying with a computer, comprises the steps of - determining whether a target optical record carrier or a non-target optical record carrier is inserted into a drive of the computer, and - in case a target optical record carrier is inserted into the drive of the computer - modifying read requests to the protected data areas so that no data is read or the read data is useless, and/or - modifying write commands in respect to the data within the protected data areas to a recordable record carrier or other storage so that the written data is useless.
